## SEMINAR DESCRIPTION

This full day seminar will address key concepts for the recognition, evaluation and control of diesel emissions in workplaces. The content focuses on practical and relevant information across the following key areas:

- Occurrence of diesel emissions
- Health effects of diesel emissions
- Exposure Standards for emissions
- Sampling & analytical methods
- Control of diesel emissions exposure
- The future for diesel emissions

The seminar will include a case study exercise and practical information for occupational hygienists and safety professionals to reinforce the major learning outcomes.
